

We are inspired and engaged through an enriching cross-curricular approach to learning .

We learn through practical, exploratory lessons, using a range of scientific equipment.

We can see Science all around us and can make links with Science in the real world.

Science teaching and learning in our school is good when...

We are working together, discussing and sharing our thoughts and ideas.

We are able to explore open-ended questions and make mistakes.

We are developing our scientific language and using this to understand, question, hypothesise and discuss science all around us.
